

### IPCO Legend® Herbicide

IPCO Legend is a herbicide for control of wild oats and green foxtail in **wheat only**. One case of Legend contains 2 components; Legend A herbicide; and Legend B adjuvant.

The active ingredient clodinafop-propargyl in Legend A is similar to other products in the market with a formulation of 240 grams / litre EC.

### Package Size –

One case of Legend contains 1 jug of Legend A (3.68 Litres) and 1 jug of Legend B (6.4 Litres). A case of Legend will treat 40 acres of wheat, at the most common water volume of 5 gallons per acre. No additional adjuvant is required.

For growers who prefer to apply Legend at 10 gallons per acre (GPA), extra Legend B adjuvant is required to maintain good performance. **If additional Legend B is not added to 10 gallons per acre applications of Legend, reduced control of wild oats and green foxtail may occur.** For every 40 acres of Legend sprayed at 10 GPA, a grower will need 1 extra jug of Legend B. So, for example, a grower applying Legend on 80 acres would need 2 cases of Legend and 1 case of Legend B (see table below).

Product Name	Contents/Case	# Cases/40 Acres		# Cases/80 Acres	
		@ 5 GPA	@ 10 GPA	@ 5 GPA	@ 10 GPA
Legend	Legend A Herbicide (1 x 3.68 L jug) + Legend B Adjuvant (1 x 6.4 L jug)	1	1	2	2
Legend B	Legend B Adjuvant (2 x 6.4 L jugs)	-	0.5 (1 jug)	-	1

Always follow the current Legend product label ([www.ipco.ca](http://www.ipco.ca)) directions.
