Chronic Effects/

Carcinogenicity: The International Agency for Research on Cancer (IARC) lists exposure to

> chlorophenoxy herbicides as a class 2B carcinogen, the category for limited evidence for carcinogenicity in humans. Newer rat and mouse lifetime feeding studies did not show

carcinogenic potential for MCPA

Testicular effects and lower male fertility have been noted in animal studies. Reproductive Toxicity:

Developmental Toxicity MCPA studies in laboratory animals have shown decreased fetal body weights and

delayed development in the offspring at doses toxic to mother animals

Genotoxicty: There have been some positive and some negative studies, but the weight of evidence is

that MCPA is not mutagenic.
